PATIENTS: THE REASON WE PURSUE EXCELLENCE.

It's such a simple, powerful truth. And it's the first step in understanding excellence in care. When we serve patients with their best outcomes in mind, excellence is the ultimate result. But, what, exactly, does that look like?

4 CHARACTERISTICS OF EXCELLENT ANESTHESIA SERVICES IN AN ASC

We've come to recognize a few characteristics essential to achieving and maintaining excellence in care.

#1 Tailored Triage

Patient selection is critical. Our anesthesiologists can manage all ASA scores. If a facility doesn't use a specialized selection algorithm, we help design one.

#2 Regional Awareness

Our anesthesiologists are sensitive to the medical, political and financial realities of operating in the Southern California region.

#3 Top-Rated Anesthesiologists

The best ASCs staff the best doctors. Simple as that.

- Renowned efficiency and adaptability in diverse settings
- Physician-owned, over 100 full-time providers, all board certified or eligible
- 50+ year history of excellence; turnover under 1% per year
- Largest pool of board-certified pediatric anesthesiologists in the U.S.
- 15,000 pediatric procedures performed in 2016
- 60,000 outpatient cases in 2016
- One of the nation's most stringent new-member vetting processes
- Our operating rooms are some of the most efficient in California
- 5-star excellence / ranked top 10% nationally, 3 years running (independent research group)

#4 Anesthesiologists Who Put the All in All-MD

Cost Effective, Cutting-Edge Care
With Reduced Liability

- Perioperative approach—preoperative assessment, full intraoperative service management, postoperative care
- Patient satisfaction follow-up assessment
- Pain management expertise
- Service-site electronic information sharing on best practices for clinical management / surgeon preferences
- Advanced clinical experience, including pediatric
- Clinical pathways, surgical pause / clinical team training, consultative services
- Extensive internal knowledge bank
- Complicated ultrasound-guided nerve blocks / continuous catheters
- Extensive ultrasound-guided regional anesthesia experience (reduced narcotic use, shorter PACU LOS, increased patient / surgeon satisfaction)
- Proper patient selection and care for complex patients with multiple medical problems
